Oil - Beyond the Hype

- What factors drive up the price of oil?
Can declining oil supplies be explained by the Hubbert Peak theory?
- Who really controls global oil supplies?
- Should oil be treated differently to other market commodities?
- Have media interests downplayed the environmental in favour of the economic aspects?
Are there any viable alternatives to oil...and are they being given serious consideration?

Join Associate Professor Ronald Ripple, Department of Economics Macquarie University, David Ellyard (winner of the Eureka Awards Science Book Prize 2004), John August, Convenor Sydney Shove and David Kilsby from the Australian Association for the Study for Peak Oil, as they discuss the ramifications the ever-diminishing supply of oil will have on the world: economically, ethically and environmentally.
